DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6 rejected under 35 U.S.C. 102(e) as being anticipated by Jindai et al (US 6582268)

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding claims 1 and 2, Jindai discloses an electron source manufacturing apparatus comprising a support having a plurality of conductors on the substrate, (see figure 14a, elements 2 and 3) and a conductive film (element 4) formed between the electrodes, and has means for adjusting a temperature of the substrate (see figure 11, chuck 216 in combination with groove 221) a vessel which has a gas inlet and exhaust port (see figure 11, inlet 220 and exhaust 219) and covers part of the substrate, means for introducing and exhausting gas into and from said

vessel (219 and 220) and means for applying a voltage (wiring lead patterns 211 located on substrate, see figure 29) to the conductor wherein part of said support has a groove (element 221) in a surface (chuck 216) in contact with the substrate (element 210).

Regarding claims 3 and 4, Jindai's groove is formed along a periphery of a region where the conductor is laid out, and is substantially rectangular, see figure 11.

Allowable Subject Matter

Claims 5-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record neither shows nor suggests the apparatus of claims 1 or 2 wherein one end of the groove is located not less than 1 mm inward from the periphery or wherein one end is located not less than 10 mm outward from the periphery.
